TECHNICAL SKILLS

LANGUAGES
C# · Java · Kotlin · TypeScript ·
JavaScript · SQL · HTML5 · CSS3

FRAMEWORKS
ASP.NET Core · React · Node.js ·
Express · Spring Boot · Redux Toolkit ·
MVVM

DATABASES & CLOUD
SQL Server · MySQL · MongoDB ·
Firebase · Azure

TOOLS & PRACTICE
Git · Docker · REST APIs · JWT ·
OWASP Top 10 · CI/CD · Agile

CERTIFICATIONS

Foundational C# with Microsoft
Certification
freeCodeCamp

HOW I WORK

- Own a feature end to end, from database schema to UI
- Design with security and edge cases in mind first
- Keep a clean commit history and branch discipline

Full stack developer who builds systems that hold up under real use, not just in a demo. I work comfortably across C#/ASP.NET Core and JavaScript/TypeScript stacks, from relational schemas and secure APIs through to the interface on top, and I care as much about the security model and database relationships as I do about how a screen feels to use. Looking for a team where I can keep building real, reliable software.

WORK EXPERIENCE

Operations Clerk
Postlink Wingtip, Pretoria

Jan 2025 to Apr 2026

- Handled 20+ client interactions a day, keeping satisfaction at 98% and resolving most issues on first contact
- Kept equipment running at 99% uptime through preventive maintenance, and covered IT support for a team of 5, usually within 30 minutes
- Built a lightweight inventory tracking system that cut data entry time by 40%, saving about 8 hours a week

KEY PROJECTS

EVIDENTIARY: Multi Tenant SaaS Project Management Platform

React · TypeScript · Node.js · Express · MongoDB

- Built full stack features end to end, from the React/TypeScript interface down to the Node.js/Express/MongoDB backend that powers it
- Rebuilt how user roles work under the hood, replacing a shaky permissions setup with proper RBAC middleware so different tenants only ever see what they should

NexusPay: Secure International Payment Platform

React · TypeScript · Node.js · MongoDB · Docker · github.com/INSY-3D

- Led a 4 person team to build a payment system trustworthy enough to actually move real money, wrapped in TLS 1.3 and AES-256-GCM encryption, holding 99.9% uptime
- Built the API and authentication layer, then tuned database queries until transactions moved 60% faster with 40% fewer frontend calls

PulseCare: Healthcare Monitoring App

Kotlin · Firebase · Material Design 3 · MVVM · github.com/XENTRIX-Portfolio/PulseCare

- Built an Android app for pacemaker patients that had to just work every time, hitting 99.9% uptime with HIPAA aligned encryption
- Added a medication reminder that cut missed doses by 85%, plus an SOS feature with a sub 2 second emergency alert

Stock Management System

React · Firebase · Node.js · Material UI · Chart.js · github.com/XENTRIX-Portfolio/Stock-ManagementSite

- Built an inventory platform tracking 1,000+ items live through Firebase, with tiered permissions so staff only touch what they're supposed to
- Added an analytics dashboard that cut stockouts by 60% and pushed audit accuracy to 99.8%

ServeSA: Municipal service portal (React · Node.js · MongoDB) handling 200+ daily citizen requests

Hourzzz: Employee time tracking app (React · Firebase) built to simplify shift logging and payroll handoffs

ESP Client: Load shedding management system (JavaScript · API integration) surfacing schedules in real time

EDUCATION

Varsity College, Pretoria
Bachelor of Computer and Information Sciences in Application Development, Graduated with Distinction
2023 to 2025 · Cumulative average 78.5% · Final Year Project: NexusPay (Team Lead)

Curro Academy Pretoria
National Senior Certificate (Matric)
